Course

**Security Management, Planning
& Asset Protection**

Course Plan

Introduction

Security and management are critical for any leading business's successful development and progression. Effective security management, personnel, and systems must integrate and support the business to secure critical assets rather than restrict its operation. As quickly as companies develop, so do the risks and threats they face. These risks and threats can primarily stem from internal sources such as personnel and information technology/systems or external sources such as environmental disasters or terrorism. Security management can directly control some of these threats but cannot. Successful security management will ensure that the company assets have been identified and evaluated for risk and that appropriate safeguards, such as crisis management and business continuity plans, are implemented to address the identified threats.

Course Objectives:

- ✓ Learn the best management practices and how to apply these principles.
- ✓ Plan security projects and implement them effectively.
- ✓ Create a protection program to protect intellectual property in addition to physical assets.
- ✓ Run a proactive professional security team.
